### Server Commands

|                                     |                           |
|-------------------------------------|---------------------------|
| Start the default engine (Lucee)    | start                     |
| Start most recent Adobe Server 2018 | start cfengine=adobe@2018 |
| Start most recent Adobe Server 2016 | start cfengine=adobe@2016 |
| Start most recent Adobe Server 11   | start cfengine=adobe@11   |
| Start most recent Lucee 5           | start cfengine=lucee      |
| Start server with rewrites enabled  | start --rewritesEnable    |
| ColdFusion Admin Username           | admin                     |
| ColdFusion Admin Password           | commandbox                |

### ColdBox

|                               |                                                                                                                                                         |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description                   | ColdBox is a conventions modular MVC development platform for ColdFusion (CFML).                                                                        |
| Documentation                 | <a href="https://forgebox.io/view/coldbox">https://forgebox.io/view/coldbox</a>                                                                         |
| Install                       | box install coldbox                                                                                                                                     |
| ColdBox Getting Started       | <a href="https://coldbox.ortusbooks.com/getting-started/getting-started-guide">https://coldbox.ortusbooks.com/getting-started/getting-started-guide</a> |
| Create new application        | coldbox create app MyPlayground                                                                                                                         |
| Create ColdBox App            | coldbox create app <template>                                                                                                                           |
| Create ColdBox App Wizard     | coldbox create app-wizard                                                                                                                               |
| ColdBox Template Descriptions | <a href="https://coldbox.ortusbooks.com/getting-started/installation">https://coldbox.ortusbooks.com/getting-started/installation</a>                   |

### Misc

|                                                               |                                                  |
|---------------------------------------------------------------|--------------------------------------------------|
| CommandBox Properties File (must be in same directory as exe) | commandbox.properties                            |
| Specify CommandBox Home                                       | commandbox_home=Z:\C-commandBox\CommandBox-Files |
| Play Snake                                                    | snake                                            |
| CommandBox Bullet Train                                       | install commandbox-bullet-train                  |

### CFConfig

|                             |                                                                                                                     |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------|
| Description                 | This is a CommandBox module that provides a CLI for reading, writing, and storing configuration for all CF engines. |
| URL                         | <a href="https://forgebox.io/view/commandbox-cfconfig">https://forgebox.io/view/commandbox-cfconfig</a>             |
| Install                     | box install commandbox-cfconfig                                                                                     |
| Update                      | box update --system                                                                                                 |
| View all configuration      | cfconfig show                                                                                                       |
| Export config from a server | cfconfig export myConfig.json                                                                                       |
| Import config to a server   | cfconfig import myConfig.json                                                                                       |
| Set a configuration setting | cfconfig set adminPassword=commandbox                                                                               |

### Ngrok

|               |                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description   | Ngrok is a service that will proxy a locally-running server to the Internet where any coworker, friend, or client with a browser can view the local site you have running. Use this to demo a new site or ask a friend to look at an error for you. This is also great for testing integration with 3rd party systems (like Stripe webhooks) while still developing on localhost! |
| Documentation | <a href="https://forgebox.io/view/box-ngrok">https://forgebox.io/view/box-ngrok</a>                                                                                                                                                                                                                                                                                               |
| Install       | box install box-ngrok                                                                                                                                                                                                                                                                                                                                                             |

### Ngrok (cont)

|                                        |                    |
|----------------------------------------|--------------------|
| Start a share                          | server share start |
| Stop a share                           | server share stop  |
| Start sharing - server already running | share              |
| Stop sharing - server already running  | share stop         |
