

Documentation

Find the official Confluence documentation [here](#).

Search fields

You can use fields (*title, type, macroName, spacekey, labelText*) in the search field.

But, you may be better off just using the filters in Confluence's extended search.

Exact Matches

<i>"product manager"</i>	Search result contains "product manager". Does not contain just "product" or just "manager"
<i>"entire boxes"</i>	Plural of words. Search result contains "entire boxes". Does not contain "entire box"
<i>"Dev/Prod"</i>	Special characters are ignored (<i>/, &, _</i>). Results contain "Dev/Prod", "Dev&Prod", "Dev_Prod" or "Dev Prod"
<i>"the test"</i>	Common stop words (<i>and, the, or, it</i>) are always excluded

💬 Use double quotes for exact matches

Excluding terms

<i>chalk</i>	To search for content that contains the term 'chalk' but
<i>NOT</i>	not 'cheese', use the operator <i>NOT</i> in capital letters
<i>cheese</i>	
<i>chalk -</i>	Instead of <i>NOT</i> , you can use a minus sign (-) in front of
<i>cheese</i>	the word to exclude

👍 Use the operator *NOT* only in capital letters

👎 Lower case will deliver different results

Fuzzy search

<i>octogan~</i>	The search will find <i>octagon</i> and possible misspellings
-----------------	---

💬 Use a tilde (~) to find words spelled similarly, or to pick up misspellings.

Alphabetical range

<i>[adam TO ben]</i>	The search all words that fall within <i>adam</i> and <i>ben</i>
----------------------	---

! The search range should be small enough, else you will drown in pages.

AND, OR and NOT operators

<i>chalk OR</i>	To search for content that contains one of the terms, 'chalk' or 'cheese', use the operator <i>OR</i> in capital letters
<i>cheese</i>	
<i>chalk AND</i>	To search for content that contains both the terms 'chalk' and 'cheese', use the operator <i>AND</i> in capital letters
<i>cheese</i>	
<i>(cheese OR butter)</i>	To search for content that must contain 'chalk' but can contain either 'cheese' or 'butter', use brackets to group the search terms
<i>AND chalk</i>	

👍 Use the operators *OR* and *AND* only in capital letters

👎 Lower case will deliver different results

Wildcards

<i>"b?tter"</i>	Single character. Returns 'butter', 'bitter', 'better', or 'batter'
<i>"chick**"</i>	Multiple characters. Returns 'chicken' or 'chickpea'
<i>"c*c**"</i>	Multiple wildcards. Returns 'chick', 'coconut', or 'chickpea'
<i>"c*c?"</i>	Combine wildcards. Returns 'chick' but not 'chickpea'

💬 To perform a single character wildcard search, use the *?* symbol.

💬 To perform a multiple character wildcard search, use the *** symbol.

Proximity search

<i>"octagon</i>	The search will return 'Octagon blog post', but not
<i>post"~1</i>	'Octagon team blog post'

💬 Use a tilde (~) followed by a number to find two words within a certain number of words of each other.

👍 The number following the tilde must be greater than zero.
